

The **PRESSURE** of Positioning

Presented by Mission Health Concepts,
in partnership with the Monroe Learning Network*

Learning Objectives:

1. Identify 3 risk factors when using the Braden scale to determine postural interventions.
2. Articulate three benefits of using the combination of tilt and recline to reduce tissue deformation and enhance perfusion.
3. Define the difference between pressure redistribution and pressure reduction
4. Display an understanding of the benefits of the four principles of Dry Floatation Technology.
5. List two benefits of dynamic movement while utilizing a seated support surface.

Course Overview:

This **one hour CEU course** will engage clinicians involved in the care of long term wheelchair users and focus on the benefits of both proper seating and surface selection in order to reduce incidents of tissue deformation and resulting pressure injuries. Emphasis will be placed on clinical research showing the benefits of tilt, recline, and dynamic movement as well as comparing the four principles of Dry Floatation Technology on a variety of support surfaces.

Target Audience:

Physical Therapists, Physical Therapy Assistants, Occupational Therapists, and Occupational Therapy Assistants.
